8. "Network" :
Network is a system of interconnected nodes and links. It can be used for data communication, resource sharing, and other purposes. The nodes are the devices that are connected to the network, and the links are the physical or logical connections between them. The network can be organized in different ways, such as a star, ring, or bus topology. The network can also be used for various applications, such as file sharing, printing, and internet access.

9. :
The network is a system of interconnected nodes and links. It can be used for data communication, resource sharing, and other purposes. The nodes are the devices that are connected to the network, and the links are the physical or logical connections between them. The network can be organized in different ways, such as a star, ring, or bus topology. The network can also be used for various applications, such as file sharing, printing, and internet access.

10. Networking :
Networking is the process of connecting different devices to a common network. This can be done using various technologies, such as Ethernet, Wi-Fi, and Bluetooth. The network can be used for data communication, resource sharing, and other purposes. The network can be organized in different ways, such as a star, ring, or bus topology. The network can also be used for various applications, such as file sharing, printing, and internet access.
